TananCal Website Structure

Navigation Bar:

- Overview
- Groups
- Calendar
- Profile
- Settings

Pages:

- Overview
    - Small box: Summary of total Groups
    - Small box: Upcoming Group Events
    - Small Button (Same size as small box): Plan New Event
        - Clicking this will pop-up an event creation window where you can assign a group and set an event date. After the event is created another pop-up will ask the user if they want to see the event in the group screen.
    - Medium box under small boxes: Upcoming events
        - Shows summaries of upcoming events
- Groups
    - When the group tab is first selected, it will show a large overview of all the groups
    - This will be the main page for managing groups and selecting a group will show all details for the group as well as all the management options.
    - At the top of the window, there needs to be a group select drop down. When a group is selected the whole window will change to show all management options for the group as well as events, equipment, and food.
        - The management options should be:
            - Adding/Removing Members (only available for the creator of the group)
                - When a member is added, they will receive a confirmation whether they want to join the group. If yes, then they join the group. If no, a notification will be sent to the admin that the invite was rejected.
            - Admin Assignment (Gives a member administrative access to add and remove group members
            - Adding a member manually who is not a TananCal user should be an option
                - Adding involves giving the member a name and
            - Renaming the Group and Adding an Emoji as an Icon for the group
            - Deleting the group
                - This should have a confirm screen to make sure accidental group deletion does not happen
        - The events within a group should be an overarching event with activities within the event. Selecting an event within the group will open its own window
            - The event should have a date and time range

        - The activities need to have a date and time range
        - Activities will need an Activity Name and a Description
        - Activities will have an optional Activity leader which is a dropdown of all members in the group
        - The Group Event date and time should populate on the calendar tab
        - The admin will be able to edit the name, description, and date & time of the event
    - The Equipment will be an assignment and list of equipment needed for an event within the group
        - Equipment will have an equipment name and a member assignment
        - An export function (PNG, PDF, Excel) with a member filter should be available.
            - When a member is selected in the filter the export will only contain the equipment assigned to that member
            - A preview table needs to be generated before an export is available
        - Individual ingredients for food will be part of the list, so there should be an optional dropdown that ties the equipment with a food.
    - The Food will be a list of planned food for the event within the group
        - This will show the menu and expected meal date and time
        - Each food item will have a name, meal date & time, and an assignment to a member
        - When a food is selected, a pop-up window will appear showing all the details as well as giving the ability to add ingredients and optional member assignments for the ingredients.
            - If no member assignment is selected, the member assigned to the food item will be assigned to the ingredients by default
        - The admin will be able to edit the name of the food, the time & date, and the assignment
        - A food schedule needs to be exportable for each event
- Calendar
    - The calendar will be an overview calendar showing all events for all the groups
    - A Day, Week, and Month view need to be available
- Profile
    - When the profile Icon is selected, a dropdown should show the option to “Go to Profile”
    - The profile window will have the option to change how your profile looks to other users
    - You can Select an emoji as a profile picture or upload a photo.
        - By default, a user’s profile picture will be a blue monogram showing the first letter of their name
    - User will be able to edit their Name as well.
    - Other profile settings will be available as well when the site is live.
        - Example: Email address and phone number

- Settings
    - Dark mode should be the website default
        - Light mode should be available within settings
    - Notification options should also be available within settings.

Design Language:

- Roboto will be the default font
- The color palette for the site will be this:
    - 

- The Navigation bar will be in the top of the screen.
